To Tan, Jessica <Jessica.Tan@noventiq.com>; Kumrasen, Sarwen Kumar Naidu <sarwen.kumar@noventiq.com>
Cc Lim, Jeremy <Jeremy.Lim@noventiq.com>

Hi Jessica,

I took some time to go through the deck you shared and think through the topic and demo use cases for the event. Please find my suggestions below:

Proposed topic (Open for feedback)

- Title: The Pragmatic 3-6-5 AI Playbook for Capital-Efficient AI Capabilities
- Subtitle: *No custom code, no multi-million-dollar budgets—how regional SMEs operationalize Microsoft M365 Copilot Studio across 3 Phases, 6 Weeks, and 5 Universal Capabilities.*
- One-Liner Description: **"Discover how regional SMEs break through "The Copilot Wall" using the 3-6-5 Playbook—activating their existing Microsoft 365 licenses across 3 Phases and 6 Weeks to master the 5 Universal Capabilities of AI automation, turning multi-day bottlenecks into 30-second decisions."**

Initially, I planned to present how Noventiq focuses on breaking down siloed AI capabilities using the Inquiry-to-Quotation workflow as a use case. However, after reviewing the deck, I noticed that there are already sessions covering these capabilities (Agentic AI in Action and Agentic AI Scale Up).

As such, I think we should shift our presentation towards a more pragmatic topic that still aligns with the Agentic AI theme while being more SME-friendly, with a stronger focus on simplicity and ease of implementation.

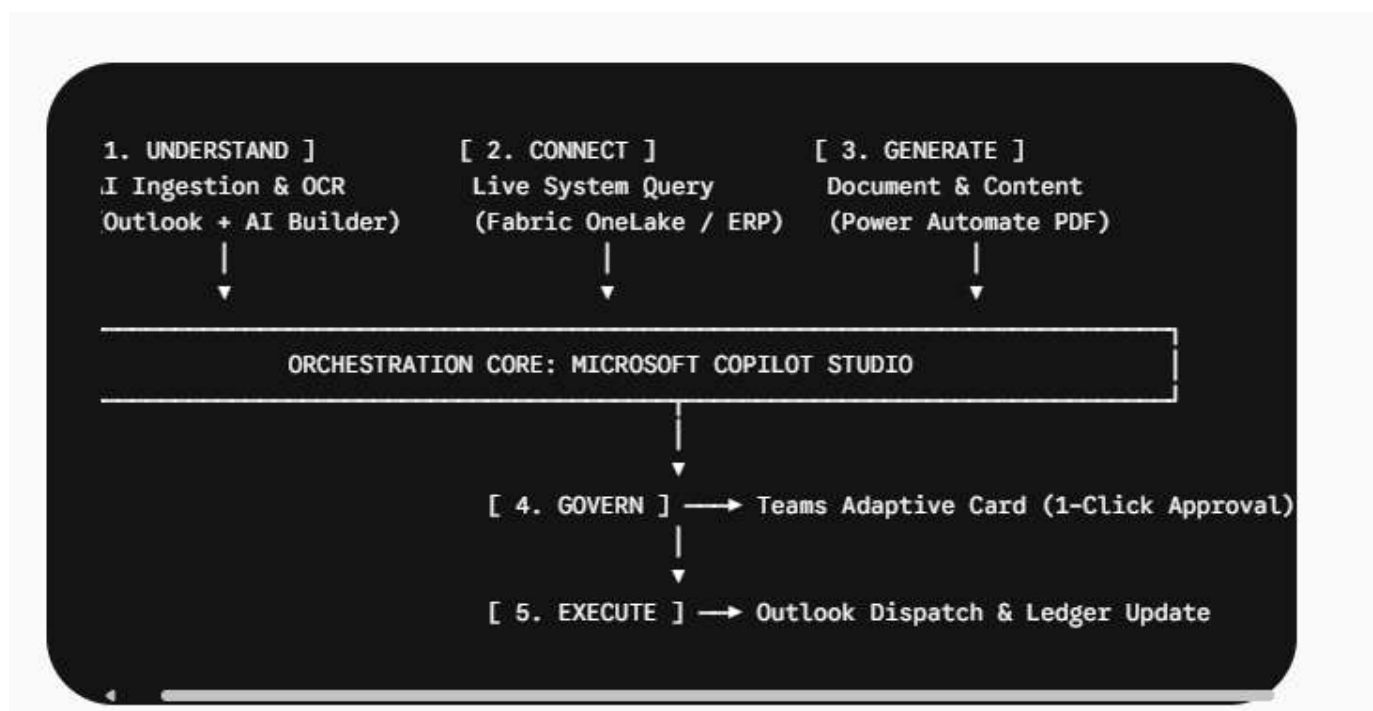

The high-level flow would be:

Slide & Section	Core Strategic Message
Opening / Slide 1: Title & The "3-6-5" Hook	Introducing the 3-6-5 Playbook —why SMEs should stop buying AI science projects and unlock the Microsoft 365 tools they already own.
Slide 2: Why SME "AI Science Projects" Fail	Share some information and data on fail or silo AI projects
Slide 3: The 5 Universal Capabilities (How It Works)	Step-by-step conceptual walkthrough of the 5 Universal Capabilities : Understand, Connect, Generate, Govern, Execute. Relate it to our use case.
Slide 4: The Low-Code Architecture Underneath	How M365, Power Automate, Dataverse, and Fabric OneLake connect securely without custom code maintenance.
Slide 5: The 3 Phases in 6 Weeks (The Roadmap)	Breaking down the 3 Phases over 6 Weeks ; the pragmatic caveat on data hygiene; regional SG—MY acceleration.
Closing Remark	Closing remark and promote Noventiq and invitation to visit the booth.

I will share more details on the content during our meeting.

[@Kumrasen, Sarwen Kumar Naidu](#), We can continue to proceed with the creation of the use case demo. Please find the information below and let me know whether this is feasible from technology point of view:

Step	Action Item	Department Aligned	How Agent works
1	Receive Customer Inquiry Email	Sales / BD	OpsAgent continuously monitors shared sales mailboxes/channels to trigger the workflow without manual data entry.
2	Extract Inquiry Requirements	Sales & Technical	Parses unstructured body text and attachments (PDFs/Word/RFPs) into structured request parameters (Product, Quantity, SLA, Delivery Specs).
3	Check Availability / Capacity	Operations / Warehouse / Inventory	Automates system checks across stock tables (products) or resource schedules (services) without Sales needing to email Operations.
4	Draft Quotation Proposal	Sales Operations / Commercial	Compiles extracted requirement parameters, verified pricing, and availability timelines into a branded PDF/Word proposal.
5	Finance Approval	Finance & Risk	Validates proposed margins, discounts, and customer credit limits. Generates an interactive approval card for Finance.
6	Dispatch Quote to Customer	Sales Personnel	Once approved, OpsAgent creates a pre-formatted draft email in Outlook attached with the PDF quote. Sales personnel reviews and clicks "Send".
